1. Be sure that the blue gasket is on the single-port side of the adapter. Remove 8 screws on top. Carefully line up new diaphragm. Screw in the screws loosely. Tighten opposite sides until all are secure.

2. Periodically check the mask's exhalation valve to be inertial. Blot in a cleaning solution and let out to dry. The adapters should be washed with soapy water and soft cloth. Disinfect by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry.

3. Adapters can be disinfect by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. The adapters should be washed with soapy water and soft cloth. Disinfect by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry.

4. Perform fit test. Connect two-connector side and the blue tube to the single-connector side and the clear tubes to the other two-connector side of the adapters. Insert the adapters into the mask as you would a cartridge or filter. Connect the clear tubes to the opposite sides of the adapters. Perform a fit test.

INSTRUCTIONS:

1. Be sure that the blue gasket is on the single-port side of the adapter. Remove 8 screws on top. Carefully line up new diaphragm. Screw in the screws loosely. Tighten opposite sides until all are secure.

2. Periodically check the mask's exhalation valve to be inertial. Blot in a cleaning solution and let out to dry. The adapters should be washed with soapy water and soft cloth. Disinfect by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. The adapters should be washed with soapy water and soft cloth. Disinfect by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry.

3. Adapters can be disinfect by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. The adapters should be washed with soapy water and soft cloth. Disinfect by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry.

4. Perform fit test. Connect two-connector side and the blue tube to the single-connector side and the clear tubes to the other two-connector side of the adapters. Insert the adapters into the mask as you would a cartridge or filter. Connect the clear tubes to the opposite sides of the adapters. Perform a fit test.
INSTRUCTIONS:
1. Be sure that the blue gasket is in place before starting test (Fig. 1)
2. Gently insert the adapters into the mask as you would a cartridge or filter
3. Connect the clear tubes to the two-connector side and the blue tube to the single-connector side (Fig. 2)
4. Perform fit test

CARE:
1. The adapters should be handled with care so as not to create damage that might interfere with testing.
2. Periodically check the metal hose connectors to be sure they are secure.
3. If the diaphragm should leak on the single-port side of the adapter, remove 8 screws on top, carefully line up new diaphragm, screw in the screws loosely. Tighten opposite sides until all are secure.
4. Adapters may be cleaned with soapy water and soft cloth.
5. Adapters can be disinfected by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. (The adapters allow outside air to be inhaled, but an employee’s exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.)
