3. If the diaphragm should leak on the single-port side of the adapter, remove 8 screws on top, carefully line up new diaphragm, screw in the screws loosely. Tighten opposite sides until all are secure.

4. Adapters may be cleaned with soapy water and soft cloth. When cleaning, do not immerse adapter pieces in any cleaning solutions.

5. Adapters can be disinfected by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. The adapters allow outside air to be inhaled, but an employee's exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.

INSTRUCTIONS:

1. Prop open or remove the inhalation valve on the mask side that will contain the adapter with two connections. The side with the double connections must have the inhalation valve propped open or removed. Tie the opposite sides until all are secure. If the adapters are loose at any point, carefully line up new diaphragm, screw in the screws loosely.

2. Push and twist-to-lock both adapter pieces onto each side of the mask. Tighten opposite sides until all are secure. If the adapters are loose at any point, carefully line up new diaphragm, screw in the screws loosely.

3. Connect the clear tubes to the two-connector side and the blue tube to the single-connector side (Fig. 2). Perform fit test. Care:

1. The adapters should be handled with care so as not to create damage that might interfere with testing.

2. Periodically check the metal to be sure they are secure. Check the adapters to be sure the adapters allow outside air to be inhaled, but an employee's exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.

3. Adapters should be free of defects and securely fastened.

4. Adapters can be disinfected by spraying a disinfectant or immersed in a cleaning solution and left out to dry.

5. Adapters may be cleaned with soapy water and soft cloth. When cleaning, do not immerse adapter pieces in any cleaning solutions.

6. Adapters allow outside air to be inhaled, but an employee's exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.

Fit Test Adapter
Kit #30
For Draeger Masks
3. If the diaphragm should leak on the single-port side of the adapter, remove 8 screws on top, carefully line up new diaphragm, screw in the screws loosely. Tighten opposite sides until all are secure.

4. Adapters may be cleaned with soapy water and soft cloth.

5. Adapters can be disinfected by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. (The adapters allow outside air to be inhaled, but an employee’s exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.)

INSTRUCTIONS:

1. Prop open or remove the inhalation valve on the mask side that will contain the adapter with two connections (Fig. 1)

2. Push and twist-to-lock both adapter pieces onto each side of the mask in place of the cartridge/filter. The side with the double connections must have the inhalation valve propped open or removed.

3. Connect the clear tubes to the two-connector side and the blue tube to the single-connector side (Fig. 2)

4. Perform fit test

CARE:

1. The adapters should be handled with care so as not to create damage that might interfere with testing.

2. Periodically check the metal hose connectors to be sure they are secure.
