1. The adapters should be handled with care so as not to create damage that might interfere with testing.

2. Periodically check the metal hose connectors to be sure they are secure.

3. If the diaphragm should leak on the center port, remove 8 screws on top, carefully line up new diaphragm, screw in the screws loosely. Tighten opposite sides until all are secure.

4. Adapters may be cleaned with soapy water and soft cloth.

5. Adapters can be disinfected by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. The adapters allow outside air to be inhaled, but an employee's exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.

INSTRUCTIONS:

1. Remove the filter assembly from the back of the CleanSpace configuration.

2. Be sure that the blue gasket is in place (Fig. 1).

3. Line up the bottom posts with the receptacle (Fig. 2).

4. Release the lever so that the clamp is vertical.

5. Push the adapter toward the mask, and push down on the clamp until the lever snaps into place (Fig. 2).

6. Connect the clear tubes to the two connectors on the side of the adapter, and the blue tube to the single port in the center (Fig. 2).

7. Perform fit test and be sure to the single port in the center port is secure.

CARE:

1. The adapters should be handled with care so as not to create damage that might interfere with testing.
INSTRUCTIONS:

If the mask does not have the filter adapter, you will need to purchase and install PAF-0038

1. Remove the filter assembly from the back of the CleanSpace configuration
2. Be sure that the blue gasket is in place (Fig. 1)
3. Line up the bottom posts with the receptacle (Fig. 2)
4. Release the lever so that the clamp is vertical
5. Push the adapter toward the mask, and push down on the clamp until the lever snaps into place (Fig. 2)
6. Connect the clear tubes to the two-connectors on the side of the adapter, and the blue tube to the single port in the center
7. Perform fit test
