Periodically check the metal hose connectors to be sure they are secure.

If the diaphragm should leak on the single-port side of the adapter, remove 8 screws on top, carefully line up new diaphragm, screw in the screws loosely. Tighten opposite sides until all are secure.

Adapters may be cleaned with soapy water and soft cloth. Adapters can be disinfected in a cleaning solution and let out to dry. The adapters may be cleaned with soap and water after use.

Adapters may be disinfected by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. (The adapters allow outside air to be inhaled, but an employee’s exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.)

INSTRUCTIONS:

1. Prop open or remove the inhalation valve on the mask side that will contain the adapter with two connections when attaching to the mask. Be careful not to cross-thread the screws on top of the adapter, leaving a leak on the single-port side. If the diaphragm is not secure, hose connectors to be sure.

2. Connect the clear tubes to the two-connector side and the blue tube to the single-connector side and the open or removed inhalation valve is propped open.

3. Connect the clear tubes to the opposite sides until all are secure.

4. Perform fit test (Fig. 2)

Care:

4. Perform fit test (Fig. 2)

3. Connect the clear tubes to the opposite sides until all are secure.

2. Connect both adapter pieces on the side with the double connections and make sure the adapter with two connections is not cross-threaded. Be careful to not cross-thread the screws on top of the adapter, leaving a leak on the single-port side. If the diaphragm is not secure, hose connectors to be sure.

1. Prop open or remove the inhalation valve on the mask side that will contain the adapter with two connections when attaching to the mask. Be careful not to cross-thread the screws on top of the adapter, leaving a leak on the single-port side. If the diaphragm is not secure, hose connectors to be sure.

The adapters should be handled with care so as not to create damage that might interfere with testing.

Adapters may be cleaned with soapy water and soft cloth. Adapters can be disinfected in a cleaning solution and let out to dry.
INSTRUCTIONS:

1. Prop open or remove the inhalation valve on the mask side that will contain the adapter with two connections (Fig. 1)

2. Screw both adapter pieces on each side of the mask in place of the cartridge/filter. Be careful not to cross-thread when attaching to the mask. The side with the double connections must have the inhalation valve propped open or removed.

3. Connect the clear tubes to the two-connector side and the blue tube to the single-connector side (Fig. 2)

4. Perform fit test
