2. Periodically check the metal hose connectors to be sure they are secure. If the diaphragm should leak on the single-port side of the adapter, remove 8 screws on top, carefully line up new diaphragm, screw in the screws loosely. Tighten opposite sides until all are secure.

3. Connect the clear tubes to the two-connector side and the blue tube to the single-connector side. Adapters can be disinfected by spraying a disinfectant open or removed. Adapters may be cleaned with soapy water and soft cloth. Adapters should be handled with care so as not to create damage that might interfere with testing.

4. Adapters may be disinfected by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. The adapters allow outside air to be inhaled, but an employee's exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.

INSTRUCTIONS:

1. Prop open or remove the inhalation valve on the mask side that will contain the adapter with two connections when attaining the mask. Be careful not to cross-thread any of the connections. If there is tension on the single-port side, the adapter should be secure. If the adapter pieces on the mask side that will contain the exhalation valve nullifying the risk of cross-contamination interfere with testing, then remove the adapter with two connections.

2. Perform fit test.

CARE:

- Adapters may be cleaned with soapy water and soft cloth.
- Adapters may be disinfected by spraying a disinfectant open or removed.
- Adapters should be handled with care so as not to create damage that might interfere with testing.

FIT TEST ADAPTER | KIT #9

OHD | FOR HONEYWELL/SPERIAN
INSTRUCTIONS:

1. Prop open or remove the inhalation valve on the mask side that will contain the adapter with two connections (Fig. 1)
2. Screw both adapter pieces on each side of the mask in place of the cartridge/filter. Be careful not to cross-thread when attaching to the mask. The side with the double connections must have the inhalation valve propped open or removed.
3. Connect the clear tubes to the two-connector side and the blue tube to the single-connector side (Fig. 2)
4. Perform fit test

CARE:

1. The adapters should be handled with care so as not to create damage that might interfere with testing.
2. Periodically check the metal hose connectors to be sure they are secure.
3. If the diaphragm should leak on the single-port side of the adapter, remove 8 screws on top, carefully line up new diaphragm, screw in the screws loosely. Tighten opposite sides until all are secure.
4. Adapters may be cleaned with soapy water and soft cloth.
5. Adapters can be disinfected by spraying a disinfectant between tests or immersed in a cleaning solution and left out to dry. (The adapters allow outside air to be inhaled, but an employee’s exhalation is routed through the exhalation valve nullifying the risk of cross-contamination.)
