These instructions are for FitTrack Gold versions 2.0.X.X

**Problem:** Browsing to a server for backup location creates error when backup initiated.

**Solution:** Create a folder on the server and give permissions based on these settings.

1. On the server, create a new folder or select an existing one.
2. Right click on the folder and select **PROPERTIES**.
3. Under Properties select **Security**
4. At the security screen select **EDIT**:
5. At this screen click on **ADD**
6. On this screen select “**Object Types**
7. Place a check mark on **COMPUTERS** and click **OK**

8. On this screen type in the name of your computer and let the system search for it by clicking on **CHECK NAMES**

When it finds your computer name click **OK**
9. This will take you back to the security screen and you will see your PC listed in the Users.
10. Select your computer and place a check mark in the **ALLOW** (full control) column and then click on **APPLY** then **OK**.

Clear out of all screens and return to FitTrack Gold.
11. From the **TOOLS** menu select **Backup** and then **Browse**.
12. From the list of folders and directories select **NETWORK**.

Look for the Server name where you created the folder

Continue opening the lists and find the folder you created, select it and click **OK**
Your FitTrack Gold Screen should look something like this:

Click on Backup and “Yes” and then START.
